PROJECT REVIEW : MILESTONE PROJECT – 1

Date: 07-04-2026

Subscription-Based Membership Engine with Tiered Logic

SDG: SDG No 9 – SDG Title(Industry, Innovation and Infrastructure)

Presented By:

P. NAGA SAI HEMANTH VTU25583– 23UECS0984

Courses Handling Faculty:

Dr-Hafizur Rahman
ASSISTANT PROFESSOR

INTRODUCTION

1

- Many online platforms today use subscription models to provide different levels of services to users. Managing user registration, login, and subscription plans efficiently is an important challenge for such systems and without this managing it becomes difficult to track which user has selected which plan.
- This project aims to solve that problem by creating a structured subscription management system by allowing users to register, log in, and choose a suitable subscription plan.
- The selected plan is stored securely in a database for future access and management.
- This approach improves organization, reliability, and user experience in the platform.
- Overall, the project demonstrates how a simple web application can effectively manage user subscriptions.

PROBLEM STATEMENT

1

- Many online platforms offer multiple subscription plans, but managing them efficiently can be difficult.

2

- Users often face confusion when registration, login, and plan selection are not properly connected.

3

4

5

- Without a proper system, storing and tracking user-selected plans becomes challenging.

6

- This can lead to errors in providing the correct services to users.

7

- There is a need for a simple and organized system to manage user subscriptions.

8

- The project focuses on creating a web-based platform for user registration and login.

9

- It allows users to select a subscription plan and stores the details in a database.
- The system ensures a smooth, secure, and user-friendly experience.

OBJECTIVES

1

2

3

4

5

6

7

8

9

- To design and develop a web-based user subscription system that allows users to register, log in, and select different subscription plans.
- To implement database integration for securely storing and managing user details and their selected subscription plans.

PROPOSED SYSTEM

1

➤ A web-based subscription management system is developed where users can easily register, log in, and select a suitable subscription plan.

2

➤ The system stores user details and selected plans in a centralized database, making data management organized and secure.

3

4

➤ It provides a simple and user-friendly interface so users can complete registration and plan selection without confusion and automatically updates the user's subscription plan in the database after selection.

5

➤ Session management is used to track users during registration and plan selection, ensuring correct data processing.

6

7

➤ It reduces manual data handling errors by automating the registration and subscription process.

8

9

➤ The platform allows quick access and easy modification of user information when required.

➤ Compared to traditional manual systems, it is faster, more reliable, and improves overall efficiency of managing user subscriptions.

TECHNOLOGIES USED

1

Frontend:

- HTML – To create the structure of web pages.
- CSS – To design and style the user interface.
- Bootstrap – For responsive and attractive UI design.
- JavaScript – For form validation and basic client-side functionality.

2

3

4

Backend:

- PHP – To handle server-side logic such as registration, login authentication, session management, and subscription plan processing.

5

6

Database:

- MySQL – To store and manage user details, login credentials, and selected subscription plans.

7

Tools:

- XAMPP – Local server environment to run PHP and MySQL.
- Visual Studio Code / Notepad++ – Code editor for development.
- Web Browser (Chrome/Edge) – For testing and running the application.

8

9

Hardware/Software Requirements:

- **Hardware:** Computer/Laptop with minimum 4GB RAM and internet connectivity.
- **Software:** Windows OS, XAMPP Server, Web Browser, and Code Editor (VS Code or similar).

MODULE DESCRIPTION

1

Module 1: User Registration & Login

Handles user registration and login functionality. It allows new users to create an account and existing users to securely log in using their email and password.

2

3

Module 2: Subscription Plan Selection

Allows users to choose a suitable subscription plan such as Free, Standard, or Premium. The selected plan is processed and linked to the user account.

4

5

6

Module 3: Database Management

Manages storing, updating, and retrieving user details and subscription information in the MySQL database while ensuring data consistency.

7

8

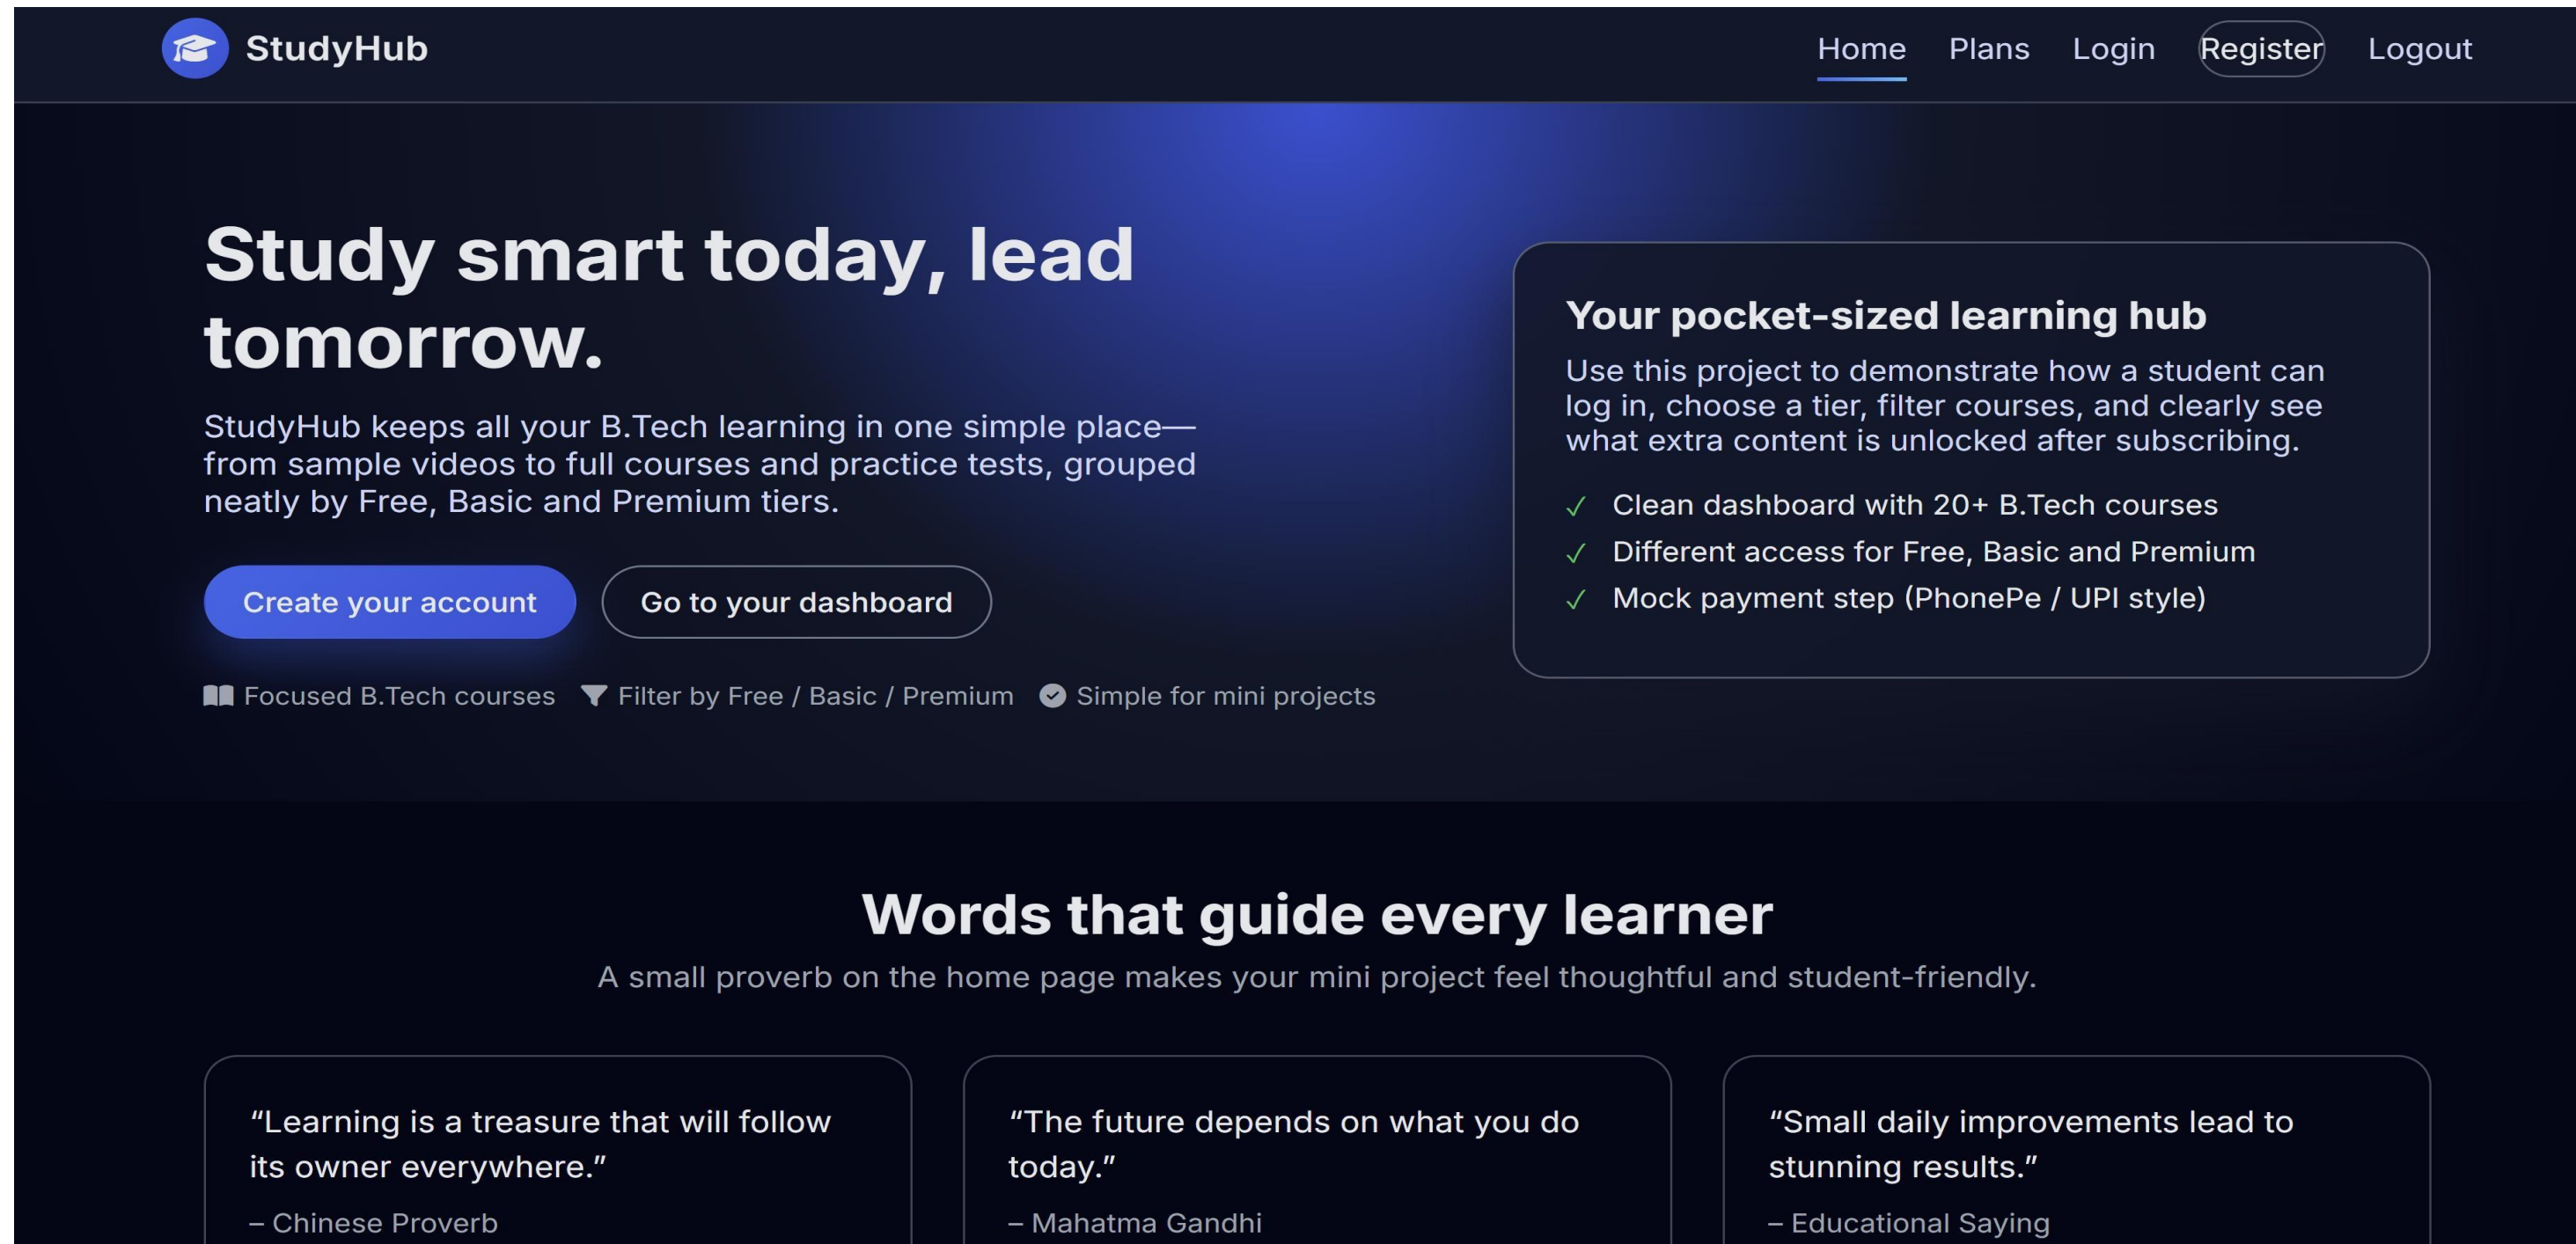

Module 4: Payment & Confirmation

Processes the selected subscription plan and displays confirmation pages such as payment success or plan activation to inform the user about the successful completion of the process.

9

IMPLEMENTATION SCREENSHOTS

The above slide is the home page of this website where if the user doesn't have an account they can register first and continue reading. If the user have an account then they can directly login to their selected plan.

IMPLEMENTATION SCREENSHOTS

8(A)

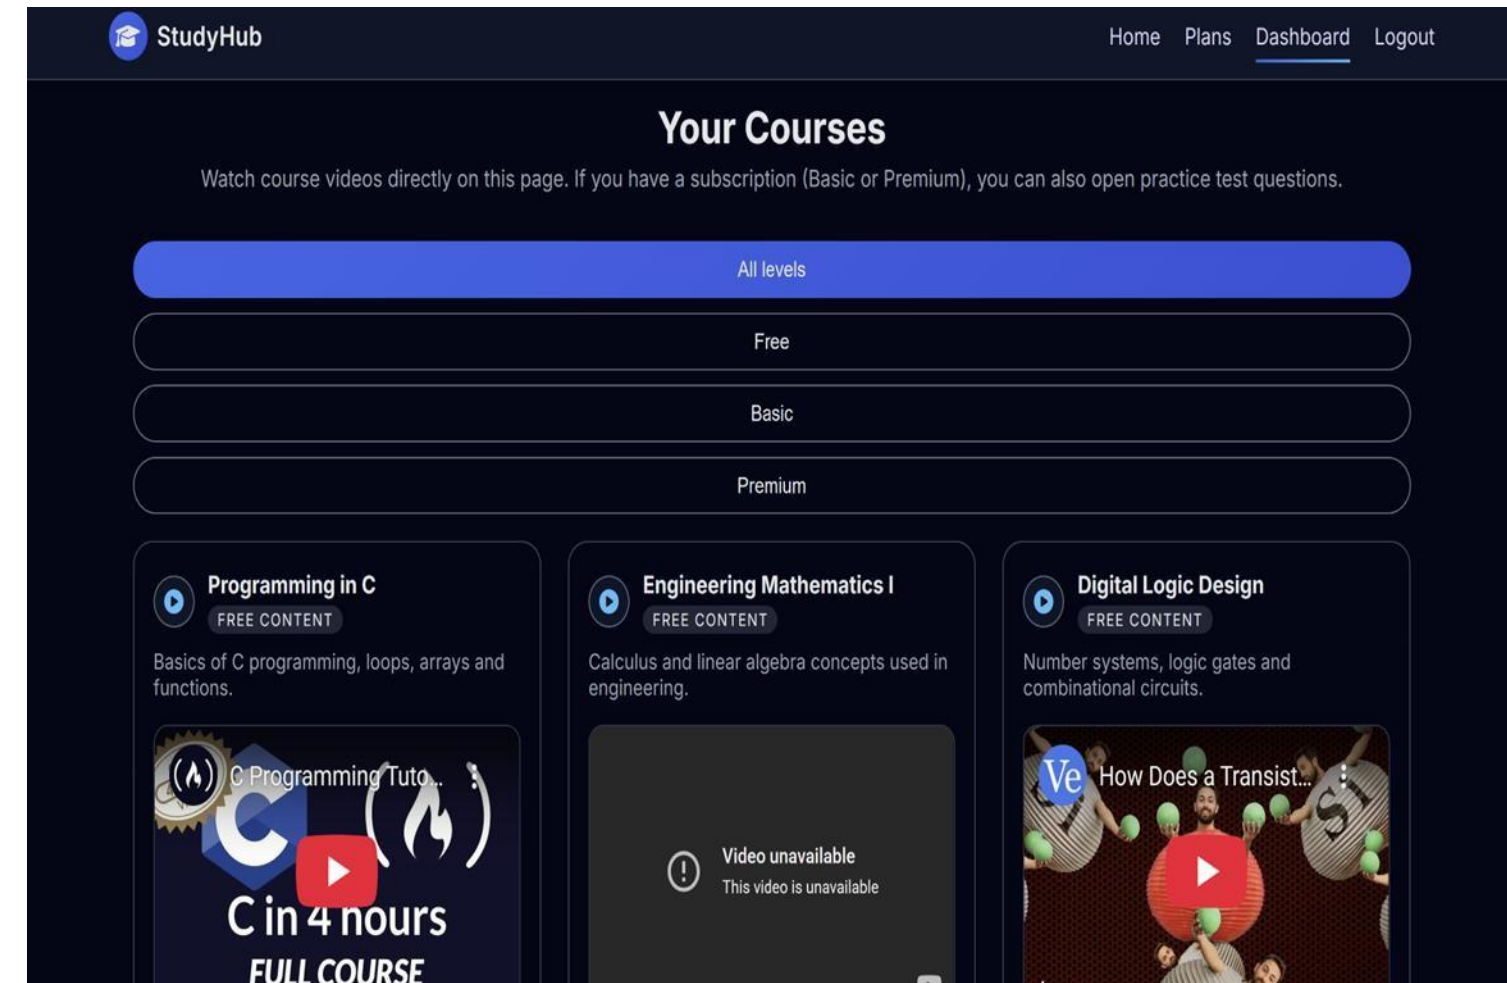

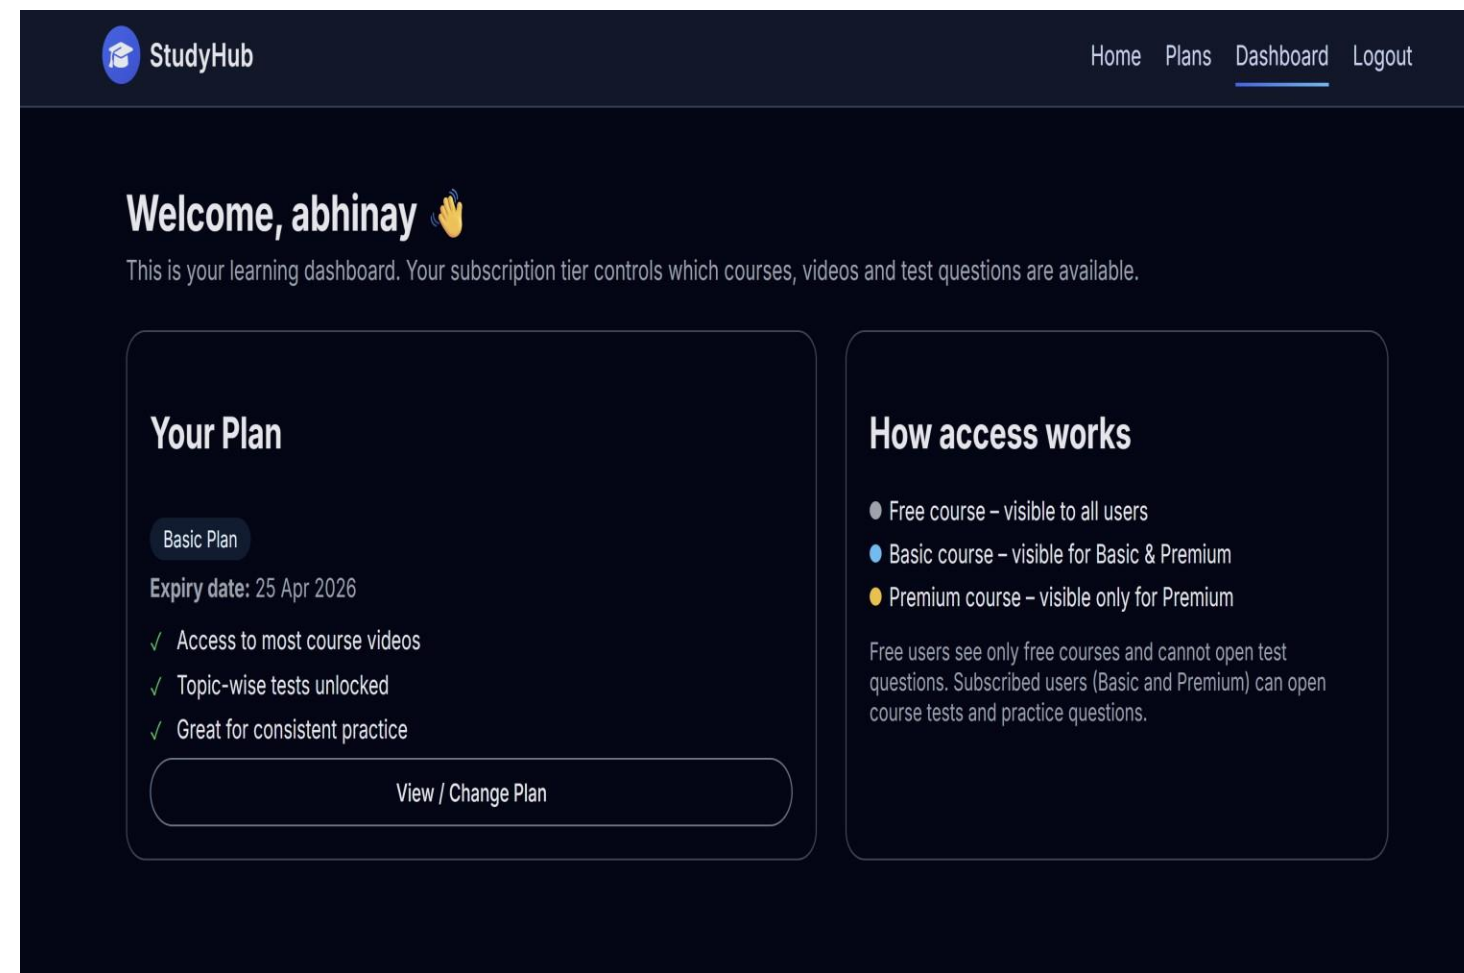

9

The screenshot shows the 'Create your StudyHub account' page. The header includes the StudyHub logo and navigation links: Home, Plans, Login, Register (highlighted), and Logout. The main content area has a dark blue background with a white registration form. The form includes fields for Name, Email (pre-filled with 'you@example.com'), Password (with a 'Minimum 6 characters' hint), and Confirm Password (with a 'Re-enter your password' hint). A blue 'Register' button is at the bottom of the form, and a link 'Already have an account? Login here' is below it.

The screenshot shows the 'Welcome back' login page. The header includes the StudyHub logo and navigation links: Home, Plans, Login (highlighted), Register, and Logout. The main content area has a dark blue background with a white login form. The form includes fields for Email (pre-filled with 'you@example.com') and Password (with a 'Your password' hint). Below the password field is a dropdown menu for 'Choose plan after login (optional)' with 'Keep my current plan' selected. A blue 'Login' button is at the bottom of the form, and a link 'New to StudyHub? Create an account' is below it.

Once the user tends to register an account they can register by giving their name, email and should create a password. If the user wants to login then they can continue by giving their registered email and password.

IMPLEMENTATION SCREENSHOTS

Once the user completes their registration they can continue with the plan selection where they have three options Free(Displays only headlines),Standard(Can view whole article),Premium(Whole article plus references). After selection, user can go to home page for login to continue their readings.

The above are the three slides the user can see accordingly once they selected their plan. After reading the new they can logout by clicking on the logout button.

ADVANTAGES & LIMITATIONS

Advantages:

- 1 ➤ Provides a simple and user-friendly interface for registration, login, and plan selection.
- 2 ➤ Helps in efficient management of user subscriptions and account details.
- 3 ➤ Stores data in a centralized database, making it easy to manage and retrieve user information.
- 4 ➤ Reduces manual work and errors by automating the subscription process.
- 5 ➤ Allows users to choose different plans (Free, Standard, Premium) based on their needs.
- 6 ➤ Improves the overall user experience with smooth navigation and confirmation pages.

Limitations:

- 7 ➤ The system is designed for basic subscription management and does not include real online payment gateways.
- 8 ➤ It currently supports limited security features, which can be enhanced for real-world applications.
- 9 ➤ The system is intended for small-scale use and may require further optimization for large numbers of users.

Thank you
